SUMMARY

Final-yearInformation Technology undergraduate at the University of Moratuwa, pursuing a BIT degree withstrong academic and practical foundations in IT systems and software development. Demonstrates a strong problem-solving mindset, entrepreneurial spirit, and eagerness to apply IT skills in a professional environment.

WORK EXPERIENCE

Draughtsman Intern — **Jan 2021 - (1 year)**
Irrigation Department - Monaragala

EDUCATION

Bachelor of Information Technology (BIT) — **May 2023 - Present**
University of Moratuwa

- Final Year (Currently in Final Semester)

Diploma in Human Resource Management - IMBS Campus — **Febuary 2026 - Present**

Diploma in IT and English - Esoft Metro Campus — **2020-2021**

National Certificate in Engineering Draftsmanship (NVQ Level 4) I Technical Collage, Monaragala — **2021.03.30 - 2022.03.30**

G.C.E. Advanced Level – Technology Stream
MO/Mahanama Central College — Monaragala

- Engineering Technology (C), IT (S), Science for Technology (S) — **2020-Index 3703415**

Project Completed

StudentManagementSystem as my final year project in ESoft Metro Campus.

- During myfinal year atEsoftMetroCampus, I developedCampusConnect, a Student Management System (SMS) delivered as a C# Visual Studio desktop application. The primary goal was to streamline academic and administrative processes for faculty and staff, moving operations from manual procedures to a centralized digital platform.The application was built using the .NET Framework (or .NET) with C# as the core programming language, leveraging Windows Presentation Foundation (WPF) or Windows Forms to create an intuitive and responsive native desktop interface. I utilized MySQL as the reliable, relational database backend for structured storage of student records, course information, and enrollment data.

Student Management System as a My First Year Project in UOM BIT.

- During myfirstyearat theUniversity of Moratuwa (UoM), I developedCampusConnect, a foundational Student Management System (SMS). This project served as a comprehensive introduction to application development, delivered as a C# Visual Studio desktop application. The primary goal was to build a functional tool for managing basic student and course data. The application was architected using the .NET Framework (or .NET) with C#, utilizing Windows Forms or WPF for a practical desktop user interface. I integrated MySQL as the backend database, focusing on establishing solid relational database management principles for storing student records and academic information.

Mobile application using Android Studio as a second-year mini-project in UOM BIT.

- During my firstyearof theBIT programattheUniversityofMoratuwa (UoM), I developed Word Guessing App, a fully functional Android game application. This project served as my comprehensive introduction to mobile application development, focusing on the core principles of UI/UX design and game logic implementation. The application was built entirely within Android Studio, utilizing Kotlin for the robust game logic, state management, and functionality. I utilized suitable for various screen sizes.

Web-based online shopping system as a second-year group project in UOM BIT.

- Duringmy secondyear intheBIT program attheUniversity of Moratuwa (UoM), I was a key member of the team that developed a Web-based Online Shopping System. This project served as a comprehensive exercise in full-stack web development, emphasizing collaborative effort, scalable design, and practical database integration. The application's Front-End was constructed using HTML for structure and CSS for styling, incorporating Bootstrap for a modern, responsive, and mobile-friendly user interface. The Back-End logic, including user authentication, product management, and order processing, was implemented using PHP. MySQL was utilized as the relational database to efficiently manage complex data structures, including product catalogs, customer profiles, and transaction records

Wasantha Eco Husk Solutions BIT Final Project UOM BIT.

- Developed a web-based system to manage coconut husk chip production and distribution processes. The system supports order management, inventory tracking, and customer handling to improve operational efficiency and reduce manual work. Built using modern web technologies with a focus on usability and sustainability. This System developed using React.js, PHP, and MySQL

ADDITIONAL INFORMATION

- **Technical Skills:** Web Development (HTML, CSS, JavaScript, PHP), React,Next.js, Prisma, MySQL, Playwright Computer Hardware & Networking, Microsoft Office
- **Languages:** Sinhala, English
